Introduction.....	3
Executive Summary.....	5
1. Climate Change Beliefs.....	8
1.1. A majority of Americans believe global warming is happening	8
1.2. Trend: Americans who do not believe global warming is happening are now as certain as those who do	9
1.3. About half of Americans believe global warming is human caused	10
1.4. Only four in ten Americans believe most scientists think global warming is happening	11
1.5. Fewer than one in four Americans know there is a scientific consensus about human-caused global warming	12
2. Emotions Associated With Global Warming	13
2.1. Half of Americans are worried about global warming, although few are “very” worried.....	13
2.2. Americans feel a variety of emotions when they think about global warming	14
3. The Perceived Threat of Global Warming	15
3.1. Global warming is seen as a relatively distant threat	15
3.2. About four in ten Americans perceive global warming as a threat to themselves, their families, and their local community	16
3.3. Over half of Americans perceive global warming as a threat to others	17
3.4. A majority of Americans perceive global warming as a threat to future generations and other species	18
3.5. One in three Americans thinks people in the U.S. are being harmed “right now” by global warming; four in ten think people around the world are being harmed now	19
4. Need for More Information	20
4.1. Three in ten Americans say they could easily change their mind about global warming	20
4.2. Trend: A growing number of Americans say they do not need more information about global warming	21
5. Looking to the Future.....	22
5.1. Trend: Over the past two years, a growing number of Americans have come to believe global warming is not happening or won't be stopped.....	22
5.2. Of those Americans who believe global warming is happening, many express cause for hope that it will be reduced	23
5.3. Of those Americans who believe global warming is happening, few say we don't need to worry about it because God, nature, or science and technology will solve it.....	24
5.4. Of those Americans who believe global warming is happening, some express cause for doubt that it will be reduced	25

6. Beliefs and Attitudes Among Global Warming's Six Americas	26
6.1. Introduction to Global Warming's Six Americas	26
6.2. The Alarmed are the most likely to say global warming is happening, the Dismissive are the least likely, and over half of the Disengaged "don't know"	28
6.3. The Alarmed are the most likely to say global warming is caused mostly by human activities and the Doubtful are the most likely to say it is caused mostly by natural changes in the environment	29
6.4. The Alarmed are the most likely to say most scientists think global warming is happening, the Dismissive are the least likely, and two in three of the Disengaged "don't know"	30
6.5. Majorities of the Cautious, Disengaged, Doubtful, and Dismissive are not very or at all worried about global warming	31
6.6. The Six Americas have different emotional reactions to global warming	32

Introduction

This report is based on findings from a nationally representative survey – *Climate Change in the American Mind* – conducted by the Yale Project on Climate Change Communication (<http://environment.yale.edu/climate-communication>) and the George Mason University Center for Climate Change Communication (<http://www.climatechangecommunication.org>). Interview dates: November 23 – December 9, 2013. Interviews: 830 Adults (18+). Total average margin of error: +/- 3 percentage points at the 95% confidence level. The research was funded by the Energy Foundation, the 11th Hour Project, the Grantham Foundation, and the V.K. Rasmussen Foundation.

Executive Summary

Key Overall Findings:

- About two in three Americans (63%) believe global warming is happening. Relatively few – only 23 percent – believe it is not. The proportion who believe global warming is real has remained steady since Spring 2013. However, the proportion who do *not* believe global warming is happening has increased 7 percentage points since Spring 2013. The proportion of Americans who say they “don’t know” whether or not global warming is happening has dropped 6 points – from 20 to 14 – since Spring of 2013.
- Over half of Americans who believe global warming is happening say they are “very” (31%) or “extremely sure” (27%) it is. Of those who do *not* believe global warming is happening, 36% are “very sure” and 20% are “extremely sure” that it is not.
- Nearly half of Americans (47%) believe global warming – if it is happening – is caused mostly by human activities, a decrease of 7 points since Fall 2012, but similar to levels over the past several years. At the same time, 37% of Americans believe that global warming is due mostly to natural changes in the environment.
- More Americans believe that most scientists think global warming is happening than believe there is a lot of disagreement among scientists (42% versus 33% respectively). However, few Americans (22%) correctly estimate that more than 80% of climate scientists think global warming is happening.
- About half of Americans (53%) say they are “somewhat” (38%) or “very worried” (15%) about global warming. This is consistent with the results from Spring 2013.
- Asked how strongly they feel specific emotions when thinking about global warming, a majority of Americans say they are strongly or moderately “interested” in the subject (59%, down 8 points since June 2010).
- Fewer than half strongly or moderately feel any of the other emotions asked about, and relatively few say they feel angry (35%), afraid (35%), guilty (26%), or depressed (24%) when thinking about global warming.
- Fewer than half of Americans (38%) believe they personally will be harmed a “moderate amount” or a “great deal” by global warming. By contrast, half or more believe that global warming will harm future generations of people (65%), plant and animal species (65%), people in developing countries (56%), people in other industrialized societies (54%), or people in the U.S. (53%).
- Four in ten say people around the world are being harmed *right now* by climate change (39%) and one in three (34%) say global warming is currently harming people in the United States.
- Three in ten Americans (31%) “somewhat” or “strongly agree” that they could easily change their mind about global warming, which is 7 percentage points lower than in March 2012.

- Over the past two years, a growing number of Americans have said that they have all the information they need to form a firm opinion about global warming, from 23 percent in May 2011 to 33 percent today.
- Among those Americans who say global warming is happening, majorities believe that people are becoming more informed about the issue (64%) and that individuals are already taking action to reduce it (62%). Over two in three also say, however, that most people don't know enough about what actions to take to reduce global warming (68%). Fewer than one in seven believes that we don't need to worry about global warming because God, nature, or science and technology will solve the problem.
- Whereas only one in twenty Americans (5%) say humans can reduce global warming and will do so successfully, one in four say we won't because people are unwilling to change their behavior (25%), and nearly one in five (16%) say humans can't reduce global warming even if it is happening.

Key Six Americas Findings:

- Of the six groups, majorities of only two – the Alarmed and the Concerned – say global warming is caused mostly by human activities (91% and 73% respectively).
- On the other side of the spectrum, the Doubtful and the Dismissive are far more likely to say global warming, if it is happening, is caused mostly by natural environmental changes (80% and 50% respectively) than by human activity (6% and 4%).
- Only majorities of the Alarmed (81%) and Concerned (66%) believe that most scientists think global warming is happening. By contrast, few of the Dismissive (6%), Doubtful (11%), or Disengaged (16%) think so.
- The majority of the Dismissive (55%) believe there is a lot of disagreement among scientists about whether or not global warming is happening. Similarly, about four in ten of the Doubtful (43%) and Cautious (43%) believe there is a lot of disagreement.
- About four in ten of the Doubtful (38%) and two in three of the Disengaged (65%) say they “don't know” whether most scientists think global warming is happening.
- Nearly all of the Alarmed (98%) and Concerned (91%) say they are “somewhat” or “very worried” about global warming. The Dismissive and Doubtful, however, present a mirror image, with 99 percent and 97 percent respectively saying they are “not very” or “not at all worried” about global warming.
- Global warming evokes the strongest emotional responses among the Alarmed and Concerned. Large majorities within both groups say they feel “moderately” or “very” *interested* in global warming (96% and 81% respectively). In fact, *interested* is the emotion most commonly cited by all groups except the Dismissive.
- Other than *interested*, the Alarmed and Concerned report many negative emotions when they think about global warming. The Alarmed say they feel *afraid* (85%), *sad* (81%), *angry* (79%), and *disgusted* (76%), while the Concerned feel primarily *helpless* (61%), *sad* (59%), and *disgusted* (56%), but also *hopeful* (56%).

- The Dismissive also report negative emotions regarding global warming, including *disgusted* (30%) and *angry* (24%), though this is likely due to their frustration that the topic – which many of them view as a hoax – receives so much attention.

1. Climate Change Beliefs

1.1. A majority of Americans believe global warming is happening.

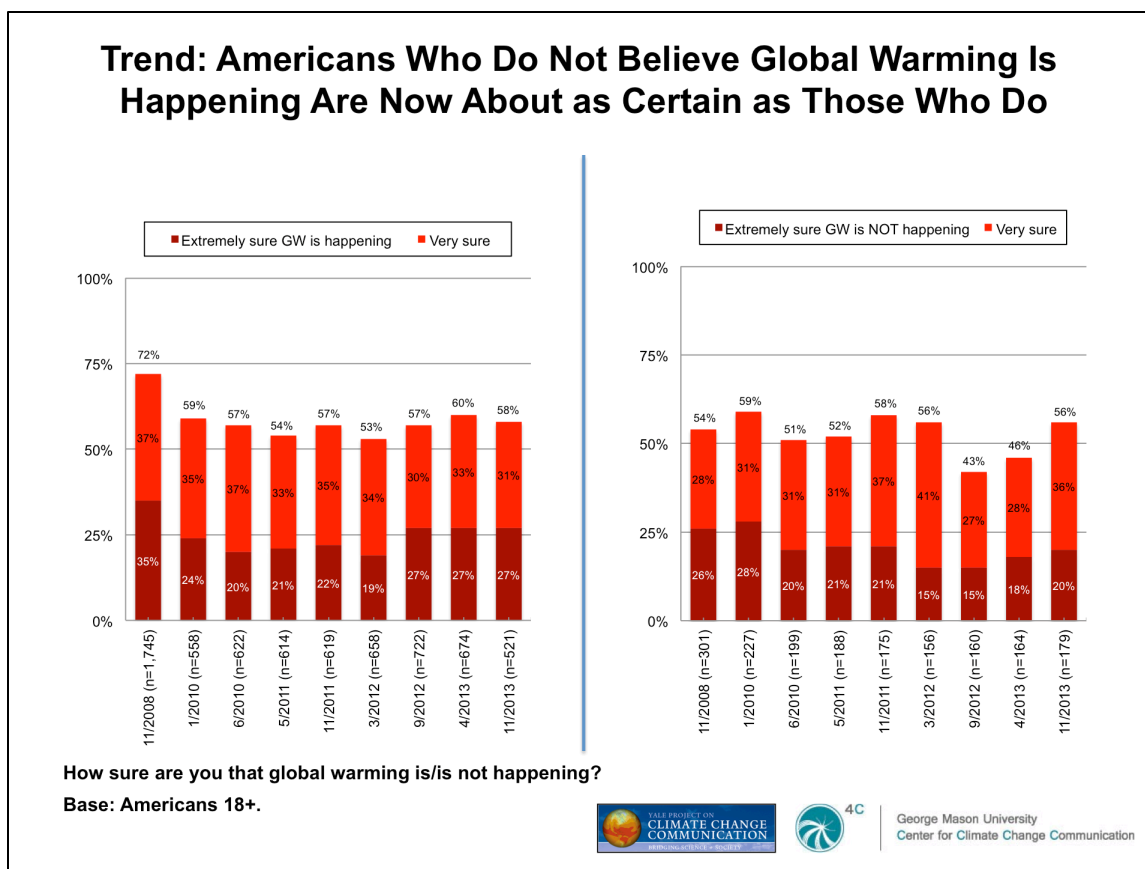

About two in three Americans (63%) believe global warming is happening. Relatively few – only 23 percent – believe it is not. The proportion who believe global warming is real has remained steady since Spring 2013. However, the proportion who do *not* believe global warming is happening has increased 7 percentage points since Spring 2013.

The proportion of Americans who say they “don’t know” whether or not global warming is happening has dropped 6 points – from 20 to 14 – since Spring of 2013.

1.2. Trend: Americans who do not believe global warming is happening are now about as certain as those who do.

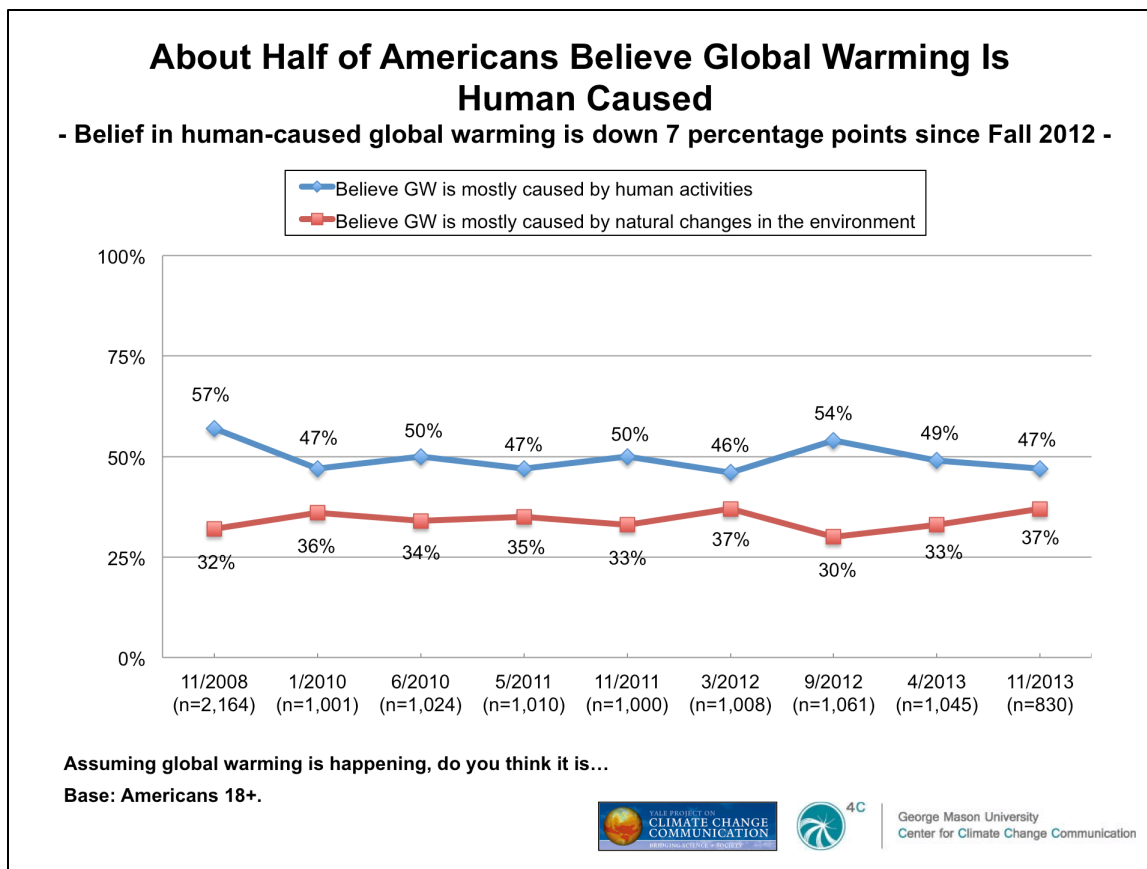

Over half of Americans who believe global warming is happening say they are “very” (31%) or “extremely sure” (27%) it is. Of those who do *not* believe global warming is happening, 36% are “very” and 20% are “extremely sure” that it is not.

1.3. About half of Americans believe global warming is human caused.

Nearly half of Americans (47%) believe global warming – if it is happening – is caused mostly by human activities, a decrease of 7 points since Fall 2012, but similar to levels over the past several years.

At the same time, 37% of Americans believe that global warming is due mostly to natural changes in the environment (an increase of 4 points since Spring 2013 and 7 points since Fall 2012), but also similar to levels over the past several years.

1.4. Only four in ten Americans believe most scientists think global warming is happening.

The great majority of climate scientists have concluded that global warming is happening, mostly human caused and, if left unchecked, will have serious consequences for human societies and the natural world. Yet, over the years, there has been considerable confusion within the American public about the level of scientific agreement on the subject.

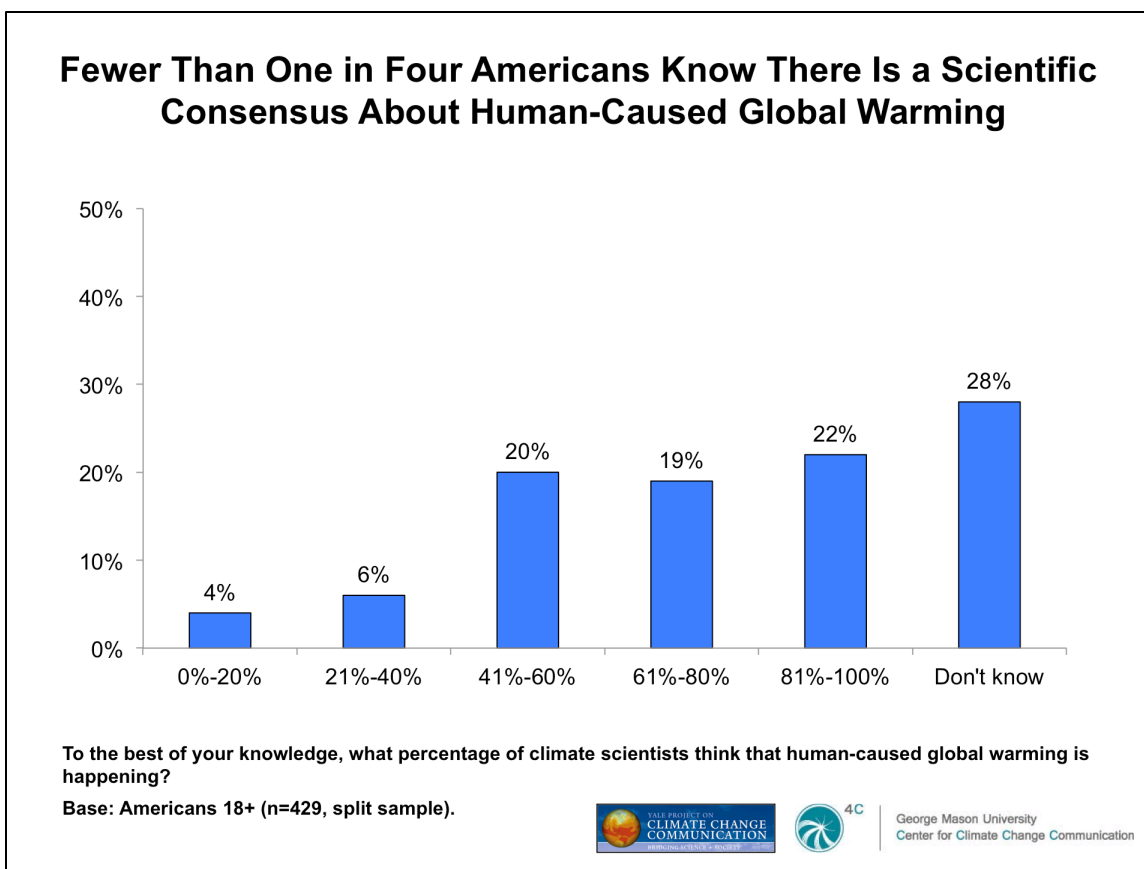

In Fall 2013, more Americans believe that most scientists think global warming is happening than believe there is a lot of disagreement among scientists (42% versus 33% respectively). This is consistent with findings observed since September 2012.

1.5. Fewer than one in four Americans know there is a scientific consensus about human-caused global warming.

Few Americans (22%) estimate that more than 80% of climate scientists think global warming is happening.

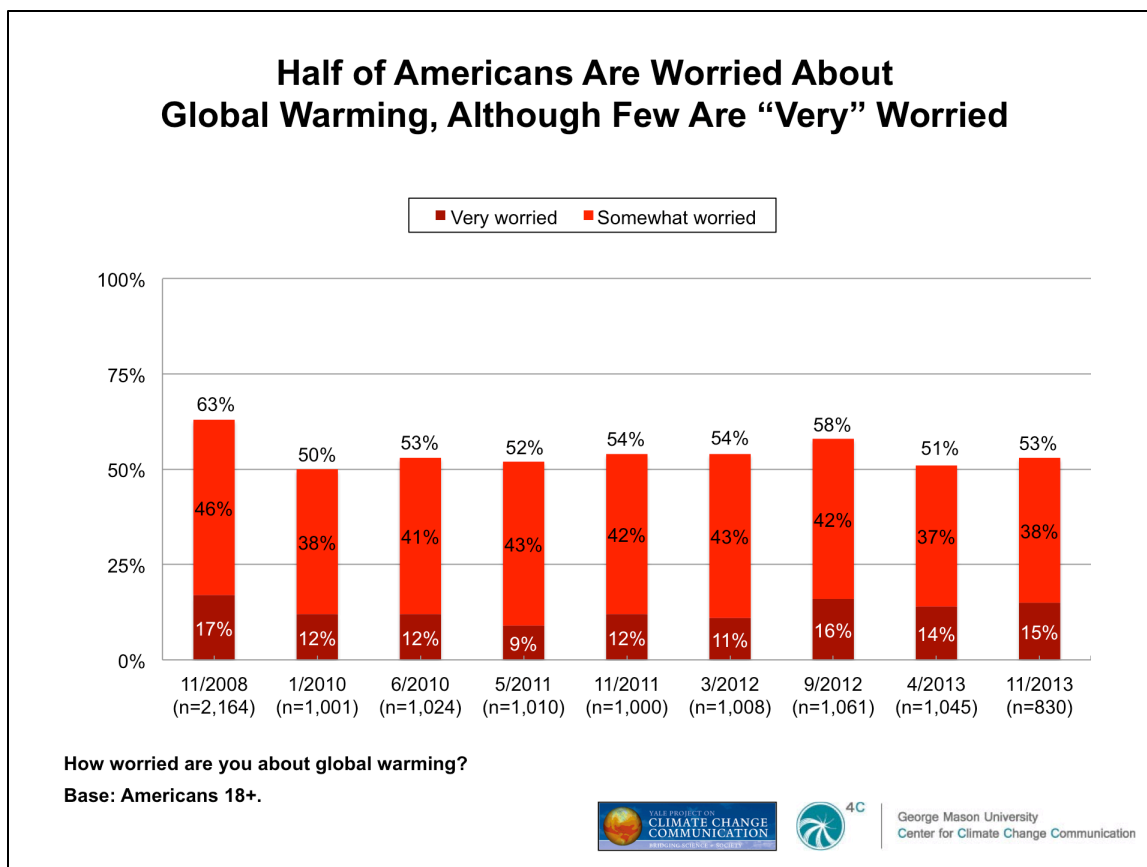

About three in ten (28%) say they “don’t know.”

2. Emotions Associated With Global Warming

2.1. Half of Americans are worried about global warming, although few are “very” worried.

About half of Americans (53%) say they are “somewhat” (38%) or “very worried” (15%) about global warming. This is consistent with the results from Spring 2013.

2.2. Americans feel a variety of emotions when they think about global warming.

Asked how strongly they feel specific emotions when thinking about global warming, a majority of Americans say they are strongly or moderately “interested” in the subject (59%, down 8 points since June 2010).

Fewer than half strongly or moderately feel any of the other emotions asked about, and relatively few say they feel angry (35%), afraid (35%), guilty (26%), or depressed (24%) when thinking about global warming.

Americans Feel a Variety of Emotions When They Think About Global Warming

- % who say they feel emotion very or moderately strongly -

	Jan. 2010	June 2010	May 2011	Nov. 2013
Base:	(1,001)	(1,024)	(1,010)	(830)
	%	%	%	%
Interested	62	67	64	59
Helpless	43	44	45	43
Hopeful	44	45	44	42
Disgusted	49	47	46	42
Sad	41	44	43	40
Afraid	34	36	38	35
Angry	43	40	37	35
Guilty	24	26	26	26
Depressed	24	21	25	24

How strongly do you feel each of the following emotions when you think about the issue of global warming?

Base: Americans 18+ (n=830).

George Mason University
Center for Climate Change Communication

3. The Perceived Threat of Global Warming

3.1. Global warming is seen as a relatively distant threat.

Over years of research, we have consistently found that, on average, Americans view global warming as a threat distant in space and time – a risk that will affect far away places, other species, or future generations more than people here and now.

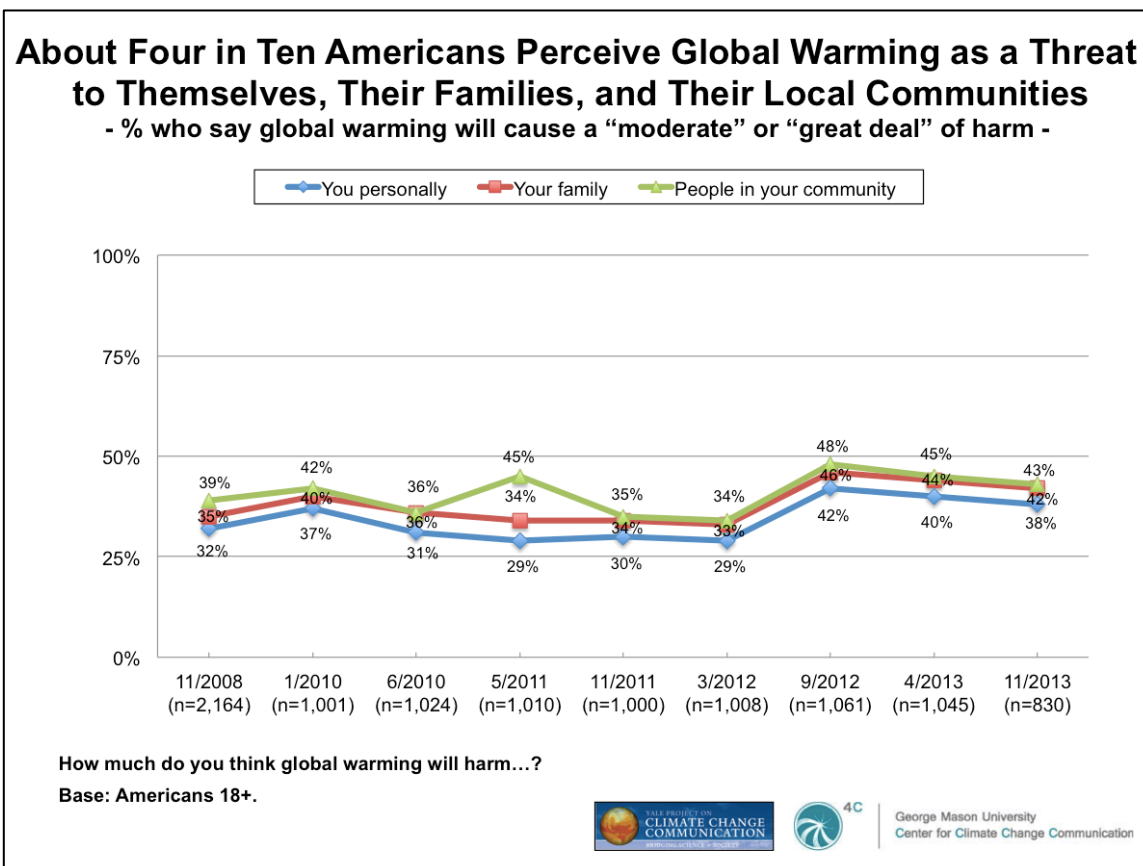

We still find this same pattern, in which fewer than half of Americans (38%) believe they personally will be harmed a “moderate amount” or a “great deal” by global warming. By contrast, half or more believe that global warming will harm future generations of people (65%), plant and animal species (65%), people in developing countries (56%), people in other industrialized societies (54%), or people in the U.S. (53%).

3.2. About four in ten Americans perceive global warming as a threat to themselves, their families, and their local communities.

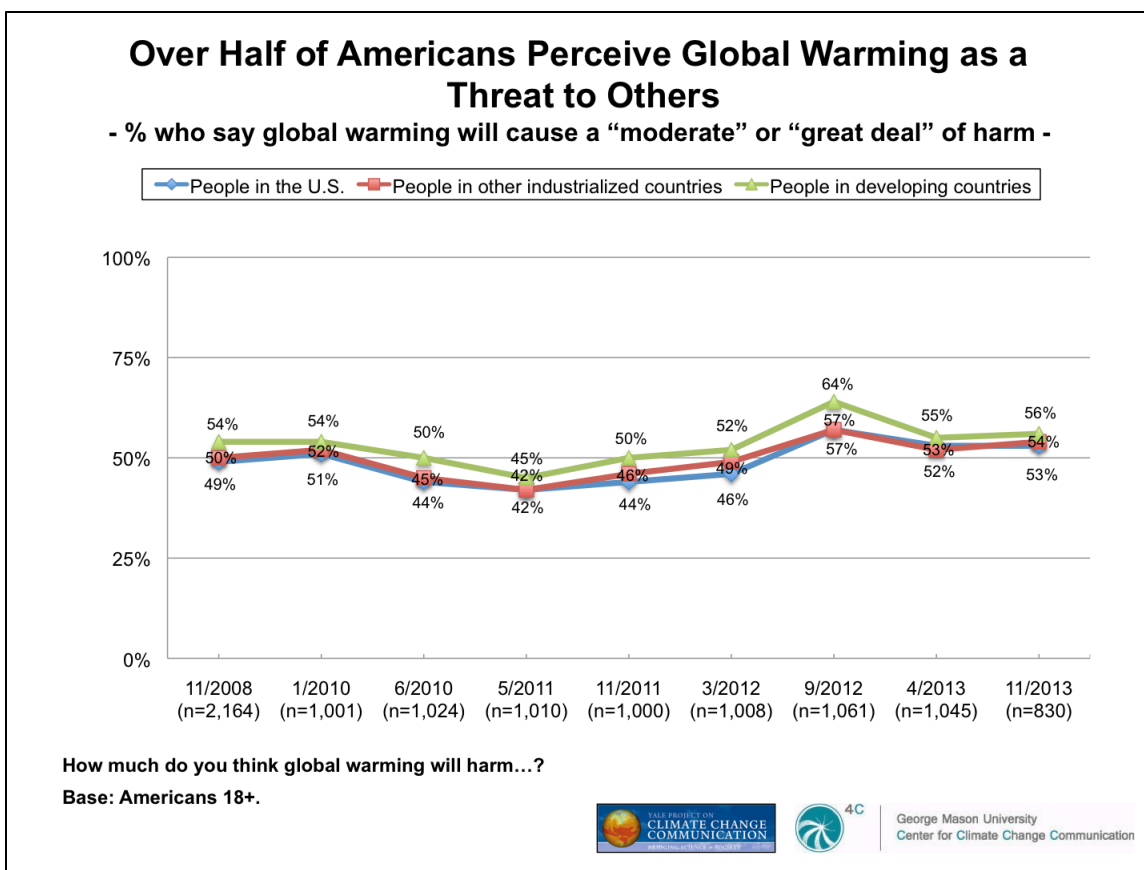

About four in ten Americans say global warming will harm people in their community (43%), their family (42%), or themselves (38%).

Though Americans today, compared to Spring 2013 and Fall 2012, are slightly less likely to perceive these threats of harm, they are more likely to do so today than they were in Fall 2011 or Spring 2012.

3.3. Over half of Americans perceive global warming as a threat to others.

About half of Americans think that global warming will harm people in developing countries (56%), in other modern industrialized countries (54%), or in the United States (53%).

3.4. A majority of Americans perceive global warming as a threat to future generations and other species.

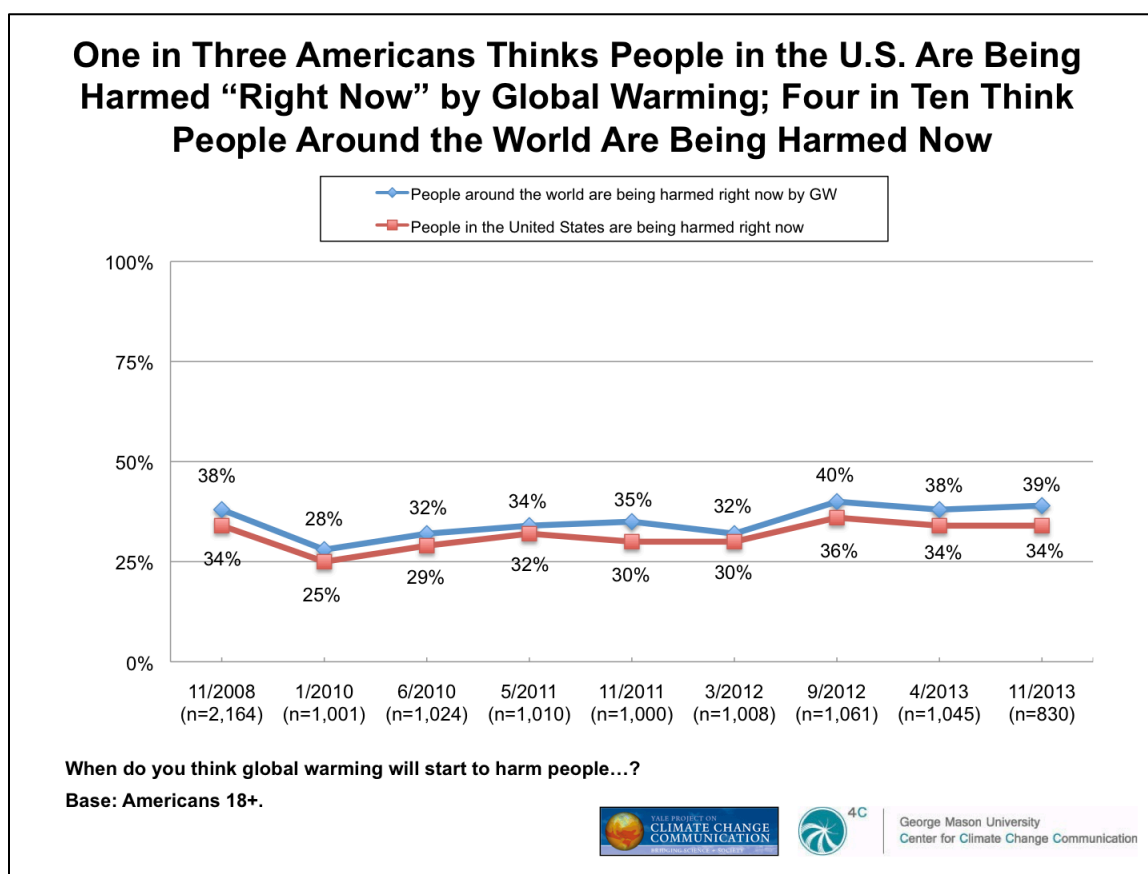

Americans also think global warming will cause a “moderate amount” or “great deal of harm” to future generations of people (65%) or to plant and animal species (65%). These proportions have remained largely steady over the past two years.

3.5. One in three Americans thinks people in the U.S. are being harmed “right now” by global warming; four in ten think people around the world are being harmed now.

Fewer than half of Americans think global warming is already harming people at home or abroad.

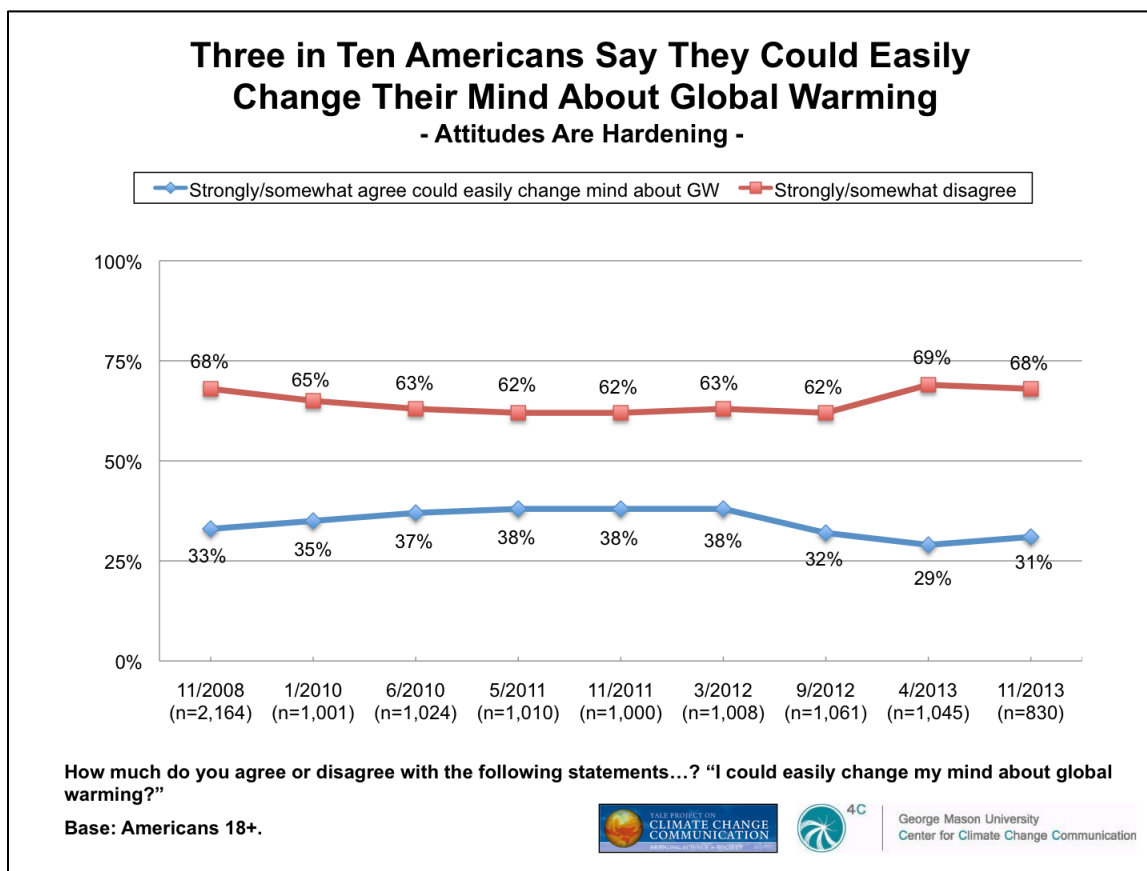

Four in ten say people around the world are being harmed *right now* by climate change (39%, up 7 points since March 2012 and generally steady since September 2012), and one in three (34%) say global warming is currently harming people in the United States (up 4 points since March 2012 and generally steady since September 2012).

4. Need for More Information

4.1. Three in ten Americans say they could easily change their mind about global warming.

Three in ten Americans (31%) “somewhat” or “strongly agree” that they could easily change their mind about global warming, which is 7 percentage points lower than in March 2012.

4.2. Trend: A growing number of Americans say they do not need more information about global warming.

Over the past two years, a growing number of Americans have said that they have all the information they need to form a firm opinion about global warming, from 23 percent in May 2011 to 33 percent today.

In the same time period, the number who say they need “some” or “a lot more” information on the subject declined 12 percentage points, from 52 percent in May 2011 to 40 percent today. These findings suggest that more people are making up their minds about global warming.

Nonetheless, two in three of Americans – 66 percent – say they would like at least a “little more” information about the subject.

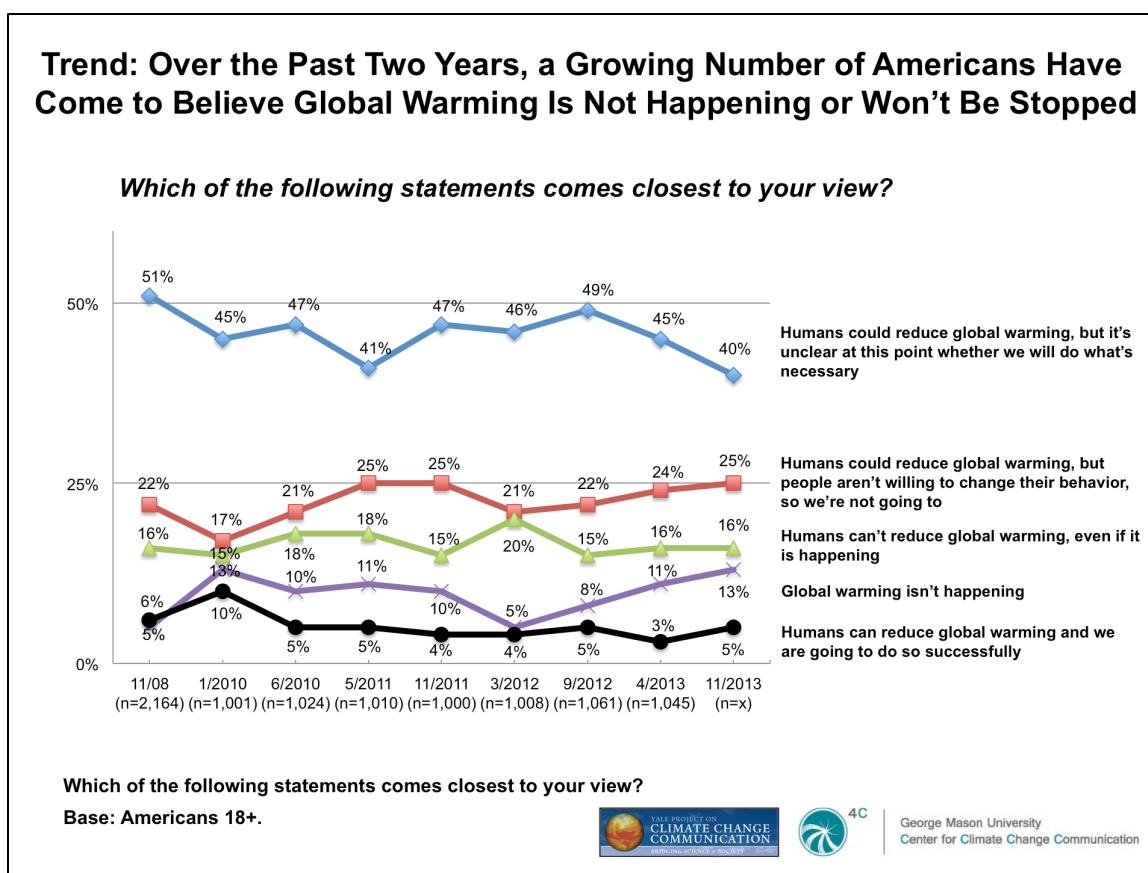

5. Looking to the Future

5.1. Trend: Over the past two years, a growing number of Americans have come to believe global warming is not happening or won't be stopped.

A plurality of Americans (40%, a 9 percentage point drop since September 2012) says humans could reduce global warming, but it's unclear at this point whether we will do what's necessary.

Among the balance of Americans, the pessimists outnumber the optimists. Whereas only one in twenty (5%) say humans can reduce global warming and will do so successfully, one in four say we won't because people are unwilling to change their behavior (25%), and nearly one in five (16%) say humans can't reduce global warming even if it is happening.

5.2. Of those Americans who believe global warming is happening, many express cause for hope that it will be reduced.

Of those Americans who believe global warming is happening, majorities “strongly” or “somewhat” agree that:

- Most people want to save resources for our children and grandchildren (67%)
- More and more people are becoming informed about global warming (64%)
- Individuals are already taking action to reduce global warming (62%)
- Once people feel the impacts of global warming, they will do something about it (58%)

5.3. Of those Americans who believe global warming is happening, few say we don't need to worry about it because God, nature, or science and technology will solve it.

Americans who believe global warming is happening do not think that the problem will be taken care of and thus there is no need to worry about it. In fact, very few strongly or somewhat believe:

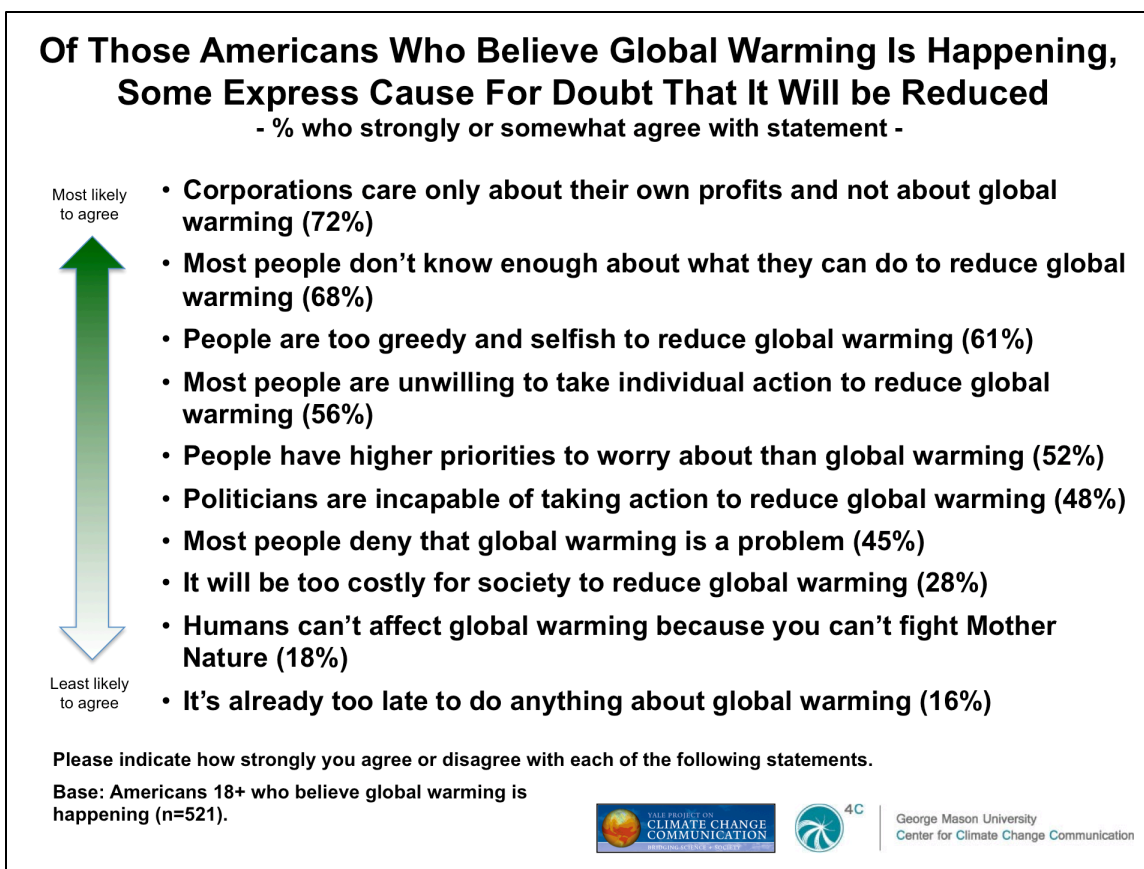

- God will take care of it (13%)
- Nature will take care of it (13%)
- Science and technology will solve it (8%)

5.4. Of those Americans who believe global warming is happening, some express cause for doubt that it will be reduced.

About half or more Americans who believe global warming is happening “strongly” or “somewhat” agree that:

- Corporations care only about their profits and not global warming (72%)
- Most people don't know enough about what they can do to reduce global warming (68%)
- People are too greedy and selfish to reduce global warming (61%)
- Most people are unwilling to take individual action to reduce global warming (56%)

6. Beliefs and Attitudes Among Global Warming's Six Americas

6.1. Introduction to Global Warming's Six Americas

In this section, we highlight the differences between *Global Warming's Six Americas*, a multivariate statistical segmentation of the American public based on their climate-related beliefs, attitudes, policy preferences, and behaviors.

Views on the issue of global warming vary in the United States, and our segmentation identifies different groups within the public that share similar beliefs, attitudes and behaviors about climate change. The segmentation divides Americans into six distinct publics that range along a spectrum of belief, concern and issue engagement.

The Six Americas Segments

The Six Americas do not vary much by age, gender, race or income – there are members of every demographic group in each of the segments. They differ instead by their global-warming beliefs, concerns and issue engagement, from the *Alarmed* to the *Dismissive*. Groups on the left of the figure above are more concerned about global warming and desire more action to reduce it, while groups on the right are relatively unconcerned and oppose action. The middle groups tend to have low issue involvement, do not think about global warming often and do not have strong – if any – opinions about the course the U.S. should pursue.

The *Alarmed* (16%) are certain global warming is happening, understand that it is human-caused and harmful, and strongly support societal action to reduce the threat. They discuss the issue more often, seek more information about it, and are more likely to act as global warming opinion leaders than the other segments. They are the most likely of the six groups to have engaged in political activism on the issue, although only about a quarter have done so.

The *Concerned* (27%) are moderately certain global warming is happening, human-caused and harmful. They tend to view global warming as a threat to other nations and future generations, but not as a personal threat or a threat to their community. They support societal action on climate change, but are unlikely to have personally engaged in political activism.

The *Cautious* (23%) are likely to believe climate change is real, but are not certain. Many do not know the cause of global warming. They are less worried than the *Concerned* and tend to view global warming as a distant threat. They have given little thought to the issue and are unlikely to have strongly held opinions about what, if anything, should be done about it.

These three groups – the *Alarmed*, *Concerned* and *Cautious* – currently comprise two-thirds of the American public. Although they range in certainty about the reality and dangers of climate change, they are similarly inclined to believe it is a real threat that should be addressed. Thus, some level of support for action is the predominant view among the majority of Americans.

The *Disengaged* (5%) have given the issue of global warming little to no thought. They have no strongly held beliefs about global warming, know little about it, and do not view it as having any personal relevance. They tend to have the lowest education and income levels of the six groups.

The *Doubtful* (12%) are uncertain whether global warming is occurring or not. If they believe that it is happening, they are likely to attribute it to natural causes rather than human activities. They tend to be politically conservative and to hold traditional religious views.

The *Dismissive* (15%), are certain that global warming is *not* occurring, tend to regard the issue as a hoax and are strongly opposed to action to reduce the threat.

6.2. The Alarmed are the most likely to say global warming is happening, the Dismissive are the least likely, and over half of the Disengaged “don’t know.”

Nearly all of the Alarmed (99%) and Concerned (93%) believe global warming is happening, just as nearly all of the Dismissive believe it is not (91%).

Among the other groups, there are varying degrees of confusion about the matter. Whereas over half (66%) of the Cautious believe global warming is happening, over half of the Disengaged say they “don’t know”.

The Doubtful are more evenly divided on the issue. Fewer than half of the Doubtful believe it is happening (25%), isn’t happening (41%), or don’t know (34%).

6.3. The Alarmed are the most likely to say global warming is caused mostly by human activities and the Doubtful are the most likely to say it is caused mostly by natural changes in the environment.

Of the six groups, majorities of only two – the Alarmed and the Concerned – say global warming is caused mostly by human activities (91% and 73% respectively).

On the other side of the spectrum, the Doubtful and the Dismissive are far more likely to say global warming, if it is happening, is caused mostly by natural environmental changes (80% and 50% respectively) than by human activity (6% and 4%).

The Cautious are about split on the issue, and fewer than half of the Disengaged offer an opinion.

6.4. The Alarmed are the most likely to say most scientists think global warming is happening, the Dismissive are the least likely, and two in three of the Disengaged “don’t know.”

Among the Six Americas, only majorities of the Alarmed (81%) and Concerned (66%) believe that most scientists think global warming is happening. By contrast, few of the Dismissive (6%), Doubtful (11%), or Disengaged (16%) think so.

Rather, the majority of the Dismissive (55%) believe there is a lot of disagreement among scientists about whether or not global warming is happening. Similarly, about four in ten of the Doubtful (43%) and Cautious (43%) believe there is a lot of disagreement.

About four in ten of the Doubtful (38%) and two in three of the Disengaged (65%) say they “don’t know.”

6.5. Majorities of the Cautious, Disengaged, Doubtful, and Dismissive are not very or at all worried about global warming.

Nearly all of the Alarmed (98%) and Concerned (91%) say they are “somewhat” or “very worried” about global warming.

The Dismissive and Doubtful, however, present a mirror image, with 99 percent and 97 percent respectively saying they are “not very” or “not at all worried” about global warming. Smaller majorities of the Cautious (56%) and Disengaged (60%) also say they are not worried.

6.6. The Six Americas have different emotional reactions to global warming.

Global warming evokes the strongest emotional responses among the Alarmed and Concerned. Large majorities within both groups say they feel “moderately” or “very” *interested* in global warming (96% and 81% respectively). In fact, *interested* is the emotion most commonly cited by all groups except the Dismissive.

Other than *interested*, the Alarmed and Concerned report many negative emotions when they think about global warming. The Alarmed say they feel *afraid* (85%), *sad* (81%), *angry* (79%), and *disgusted* (76%), while the Concerned feel primarily *helpless* (61%), *sad* (59%), and *disgusted* (56%), but also *hopeful* (56%).

The Dismissive also report negative emotions regarding global warming, including *disgusted* (30%) and *angry* (24%), though this is likely due to their frustration that the topic – which many of them view as a hoax – receives so much attention.

Interestingly, the groups for whom *hopeful* ranks most highly are those who generally have the least robust opinions about global warming. *Hopeful* is the second most strongly felt emotion by the Cautious (41%), Disengaged (30%), and Doubtful (24%). Close behind, however, *helpless* is the third most strongly felt emotion for these three groups (35%, 25%, and 20% respectively).

Across the Six Americas, feelings of *guilt* and *depression* are the least common emotions cited that we asked about.

Appendix I: Data Tables of Questions Cited in the Report

1. Climate Change Beliefs

(Base: Americans 18+)

Recently, you may have noticed that *global warming* has been getting some attention in the news. Global warming refers to the idea that the world's average temperature has been increasing over the past 150 years, may be increasing more in the future, and that the world's climate may change as a result.

What do you think: Do you think that global warming is happening?

	Nov 2013	April 2013	Sept 2012	March 2012	Nov 2011	May 2011	June 2010	Jan 2010	Nov 2008
(Unweighted base)	(830)	(1,045)	(1,061)	(1,008)	(1,000)	(1,010)	(1,024)	(1,001)	(2,164)
	%	%	%	%	%	%	%	%	%
Yes	63	63	70	66	63	64	61	57	71
No	23	16	12	14	17	18	18	20	10
Don't know	14	20	18	20	20	18	21	23	19

(Base: Americans 18+ who say global warming is happening)

How sure are you that global warming is happening?

	Nov 2013	Sept 2012	Sept 2012	March 2012	Nov 2011	May 2011	June 2010	Jan 2010	Nov 2008
(Unweighted base)	(521)	(674)	(722)	(658)	(619)	(614)	(622)	(558)	(1,745)
	%	%	%	%	%	%	%	%	%
Extremely sure	27	27	27	19	22	21	20	24	35
Very sure	31	33	30	34	35	33	37	35	37
Somewhat sure	39	37	40	42	39	40	40	37	24
Not at all sure	3	4	3	5	5	6	3	5	4

(Base: Americans 18+ who say global warming is not happening)

How sure are you that global warming is not happening?

	Nov 2013	Sept 2012	Sept 2012	March 2012	Nov 2011	May 2011	June 2010	Jan 2010	Nov 2008
(Unweighted base)	(179)	(164)	(160)	(156)	(175)	(188)	(199)	(227)	(301)

6. Beliefs and Attitudes Among Global Warming's Six Americas

(Base: Americans 18+)

Recently, you may have noticed that *global warming* has been getting some attention in the news. Global warming refers to the idea that the world's average temperature has been increasing over the past 150 years, may be increasing more in the future, and that the world's climate may change as a result.

What do you think: Do you think that global warming is happening?

Appendix II: Survey Method

The data in this report are based on a nationally representative survey of 830 American adults, aged 18 and older, conducted from November 23 – December 9, 2013. All questionnaires were self-administered by respondents in a web-based environment. The survey took, on average, about 34 minutes to complete.

The sample was drawn from GfK's KnowledgePanel®, an online panel of members drawn using probability sampling methods. Prospective members are recruited using a combination of random digit dial and address-based sampling techniques that cover virtually all (non-institutional) resident phone numbers and addresses in the United States. Those contacted who would choose to join the panel but do not have access to the Internet are loaned computers and given Internet access so they may participate.

The sample therefore includes a representative cross-section of American adults – irrespective of whether they have Internet access, use only a cell phone, etc. Key demographic variables were weighted, post survey, to match US Census Bureau norms.

The survey instrument was designed by Anthony Leiserowitz, Geoff Feinberg, Seth Rosenthal, and Jennifer Marlon of Yale University, and Edward Maibach and Connie Roser-Renouf of George Mason University.

Margins of error

All samples are subject to some degree of sampling error—that is, statistical results obtained from a sample can be expected to differ somewhat from results that would be obtained if every member of the target population was interviewed. Average margins of error, at the 95% confidence level, are as follows:

- November 2013: Fielded November 23 through December 9 with 830 American adults. The margin of sampling error is plus or minus 3 percentage points.
- April 2013: Fielded April 8-15 with 1,045 American adults. The margin of sampling error is plus or minus 3 percentage points.
- September 2012: Fielded August 31 through September 12, 2012 with 1,061 American adults. The margin of sampling error is plus or minus 3 percentage points.
- March 2012: Fielded March 12 through March 30, 2012 with 1,008 American adults. The margin of sampling error is plus or minus 3 points.
- November 2011: Fielded October 20 through November 16 with 1,000 American adults. The margin of sampling error is plus or minus 3 points.
- May 2011: Fielded April 23 through May 12 with 1,010 American adults. The margin of sampling error is plus or minus 3 points.
- June 2010: Fielded May 14 through June 1 with 1,024 American adults. The margin of sampling error is plus or minus 3 points.
- January 2010: Fielded December 24, 2009 through January 3, 2010 with 1,001 American adults. The margin of sampling error is plus or minus 3 points.
- November 2008: Fielded October 7 through November 12 with 2,164 American adults. Data were collected in two waves: wave 1 from October 7 through October 20 and wave 2 from October 24 through November 12. The margin of sampling error is plus or minus 2 points.

Rounding error

For tabulation purposes, percentage points are rounded off to the nearest whole number. As a result, percentages in a given chart may total slightly higher or lower than 100%.
