Introduction

This report is based on findings from a nationally representative survey – *Climate Change in the American Mind* – conducted by the Yale Project on Climate Change Communication (<http://environment.yale.edu/climate-communication>) and the George Mason University Center for Climate Change Communication (<http://www.climatechangecommunication.org>). Interview dates: February 27 – March 10, 2015. Interviews: 1,263 Adults (18+). Average margin of error: +/- 3 percentage points at the 95% confidence level. The research was funded by the 11th Hour Project, the Energy Foundation, the Grantham Foundation, and the V.K. Rasmussen Foundation.

Key Findings

Beliefs & Attitudes

- About two in three (63%) Americans think global warming is happening. By contrast, only about one in five Americans (18%) thinks global warming is not happening.
- One in three Americans is either “extremely” or “very” sure global warming is happening (37%). One in ten Americans is “extremely” or “very sure” global warming is not happening (9%).
- About half of Americans (52%) think that global warming, if it is happening, is mostly human caused. Three in ten (32%) say they believe it is due mostly to natural changes in the environment.
- Only about one in ten Americans understands that over 90% percent of climate scientists think human-caused global warming is happening.
- About half of Americans (52%) say they are at least “somewhat worried” about global warming, but only 11% say they are “very worried” about it.
- Only about one in three Americans (32%) thinks people in the U.S. are being harmed “right now” by global warming.

Communication

- Most Americans (74%) say they only “rarely” or “never” discuss global warming with family and friends, a number that has grown substantially since 2008 (60%).
- Only four in ten Americans (40%) say they hear about global warming in the media at least once a month (21%) or once a week (19%). Only 16% say they hear people they know talk about global warming at least once a month. One in four (25%) say they never hear people they know talk about global warming.
- Two-thirds of Americans are at least “a little interested” in hearing about global warming, whether in the media, in conversation, or somewhere else.

Policy Support

- Americans see benefits from world action to address global warming. Majorities think that such action will help the natural environment (63%) and future generations of people (62%) “a lot” or “a moderate amount.”
- Two in three Americans (64%) think developing clean sources of energy should be a very high or high priority for the president and Congress. Fewer (12%) say it should be a low priority.
- Nearly half (45%) think global warming should be a very high or high priority for the president and Congress. About one in four (24%), however, say that global warming should be a low priority.
- About two in three Americans say corporations and industry (68%) and citizens themselves (64%) should be doing “much more” or “more” to address global warming. Half or more also

believe federal, state, and local government should be doing more, including the U.S. Congress (59%), their member of Congress (57%), their local government officials (55%), their governor (55%), and President Obama (52%).

- Solid majorities of Americans “strongly” or “somewhat” support the following policies:
 - Increased funding for improvements to local roads, bridges, and buildings to make them more resistant to extreme weather (81%)
 - Providing tax rebates to people who purchase energy-efficient vehicles or solar panels (80%)
 - Funding more research into renewable energy sources such as solar and wind power (79%)
 - Regulating carbon dioxide as a pollutant (75%)
 - Requiring electric utilities to produce at least 20% of their electricity from wind, solar, or other renewable energy sources, even if it costs the average household an extra \$100 a year (66%)
- Seven in ten Americans (70%) support setting strict carbon dioxide emission limits on existing coal-fired plants to reduce global warming and improve public health, even though the cost of electricity would likely increase.
- About half of Americans (51%) say it is at least moderately important that the next congressional candidate they vote for share their views on global warming. About three in ten (31%) say it is slightly or not at all important.
- Among Americans who think global warming is happening, a majority (63%) say that it is at least moderately important that the next congressional candidate they vote for share their views on global warming. By contrast, fewer Americans who think global warming is not happening (38%) say it is at least moderately important that the next congressional candidate they vote for share their views on global warming.
- About one in four Americans (26%) are currently part of – or would “definitely” or “probably” be willing to join – a campaign to convince elected officials to take action to reduce global warming.

Values & Trust

- Majorities of Americans say global warming is a major environmental (68%), scientific (60%), or agricultural issue (55%). Nearly half consider it a major economic (46%) or health issue (44%). Few currently consider global warming to be a major national security (16%), poverty (16%), social justice (15%), spiritual (7%), or religious issue (6%).
- Americans are nine times more likely to lean toward the view that it is people’s responsibility to care for the Earth and its resources (62%) than toward the belief that it is our right to use the Earth and its resources for our own benefit (7%).
- Half or more of Americans “strongly” or “somewhat” trust the following for global warming information: Climate scientists (70%), family and friends (67%), other kinds of scientists (i.e., not climate scientists) (64%), television weather reporters (60%), their primary care doctor (57%), and Pope Francis (50%).
- Among political leaders asked about, President Obama is the most trusted, though by fewer than half of Americans (42%), followed by Hillary Clinton (39%), Jeb Bush (24%), and John Boehner (16%).

1. Global Warming Beliefs and Attitudes

1.1. A majority of Americans think global warming is happening.

Nearly four times as many Americans think global warming is happening as think it is not.

About two in three (63%) Americans think global warming is happening, a number that has remained essentially unchanged for the past two years. By contrast, only about one in five Americans (18%) thinks global warming is not happening.

Majorities of Americans across age, sex, and education levels think global warming is happening.

1.2. One in three Americans is “extremely” or “very” sure global warming is happening. One in ten is “extremely” or “very” sure it is not happening.

One in three Americans is either “extremely” or “very” sure global warming is happening (37%). One in ten Americans is “extremely” or “very sure” global warming is not happening (9%).

These numbers have remained relatively steady during the past several years.

When asked if they need more information to form a firm opinion about global warming, the majority of Americans (71%) say they do, while only three in ten (29%) say they do not need any more information. Specifically, about half say they need either “a little” (23%) or “some” more (27%) information, and one in five says she needs “a lot” more information (21%) (see p. 28).

1.3. Half of Americans think that if global warming is happening, it is mostly human caused.

The 2014 U.S. National Climate Assessment (written and reviewed by hundreds of climate experts over the past 4 years) states: “the global warming of the past 50 years is primarily due to human activities, predominantly the burning of fossil fuels. Many independent lines of evidence confirm that human activities are affecting climate in unprecedented ways” (p. 15).¹

Moreover, in a recent study investigating the degree of scientific consensus on climate change, Cook and colleagues (2013)² examined nearly 12,000 peer-reviewed papers in the climate science literature and found that of those papers that stated a position on the reality of human-caused global warming, 97% said it is happening and at least partly human caused.

Public understanding of climate change, however, is starkly different than the expert consensus.

Currently, about half of Americans (52%) think that global warming, if it is happening, is mostly human caused, a finding that has held steady since January 2010. By contrast, three in ten (32%) say they believe it is due mostly to natural changes in the environment.

¹ <http://nca2014.globalchange.gov/report>

² Cook, J., Nuccitelli, D., Green, S. A., Richardson, M., Winkler, B., Painting, R., Way, R., Jacobs, P., & Skuce, A. (2013). Quantifying the consensus on anthropogenic global warming in the scientific literature. *Environmental Research Letters*, 8. doi:10.1088/1748-9326/8/2/024024

1.4. About one in ten Americans understands that more than 90% of climate scientists have concluded human-caused global warming is happening.

Very few Americans are aware that 97% percent of climate scientists think that global warming is human-caused. In fact, only about one in ten Americans understands that more than 90% of climate scientists agree global warming is human caused, and fewer than half (45%) believe a majority do.³

This public misunderstanding of the scientific consensus – which has been found in each of our surveys since 2008 – has significant consequences. Other research has identified public understanding of the scientific consensus as a critical “gateway belief” that influences other important beliefs (i.e., global warming is happening, human caused, a serious problem, and solvable) and support for action.

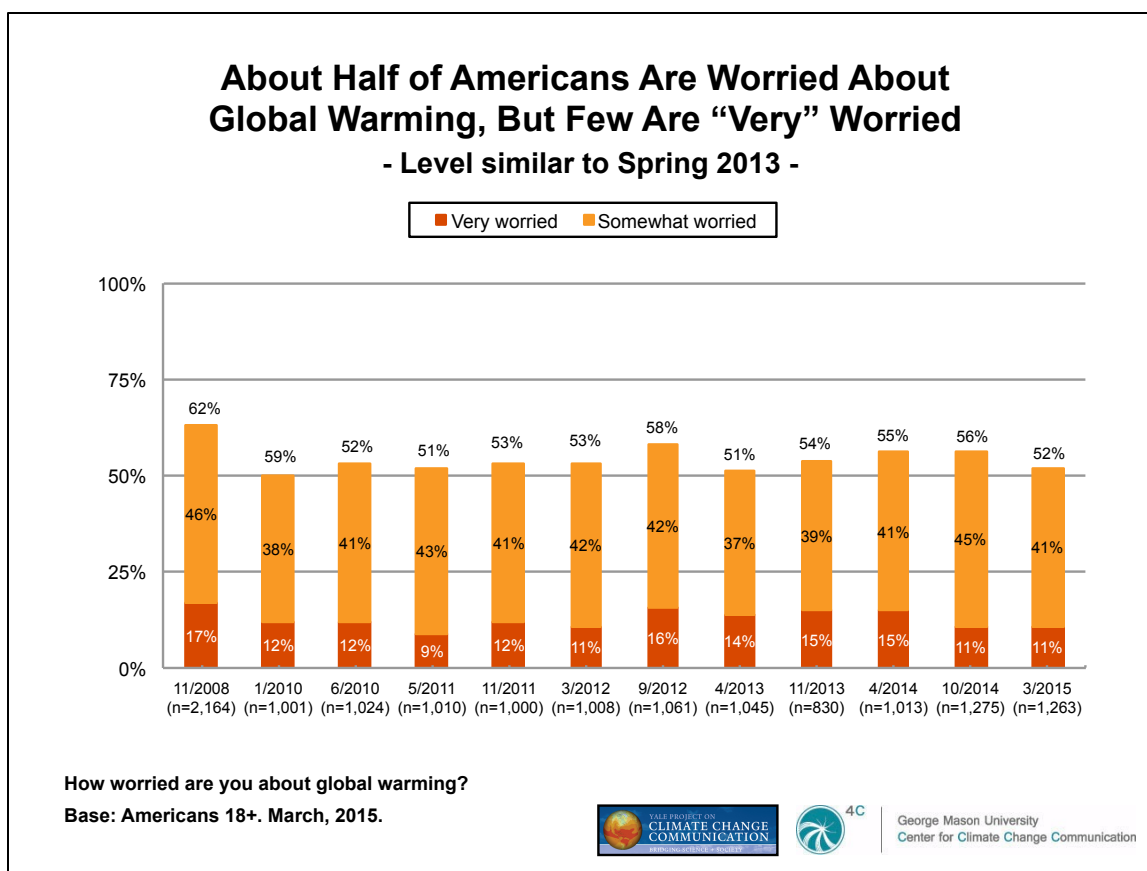

For more information, see: van der Linden, S., Leiserowitz, A., Feinberg, G., & Maibach, E. (2015). The Scientific Consensus on Climate Change as a Gateway Belief: Experimental Evidence. *PLoS ONE*, 10(2). doi: 10.1371/journal.pone.0118489

³ Respondents were asked to estimate the percentage of climate scientists who have concluded that human-caused global warming is happening by moving a simulated “slider bar” which appeared on the screen of their computer. This slider bar allowed respondents to move a marker from one end to the other, where placing the marker all the way to the left recorded a “0%” response, all the way to the right a “100%” response, and any other whole number response at points in between.

1.5. About half of Americans are worried about global warming, but few are “very” worried.

About half of Americans (52%) say they are at least “somewhat worried” about global warming, but only 11% say they are “very worried” about it.

Even as the impacts of global warming have increased over time, public worry has remained relatively stable, changing little over the past four years.

Likewise, over half of Americans (56%) say global warming is at least “somewhat” important to them personally, but only one in five (21%) says it is “extremely” or “very” important. More than four in ten (44%) say the issue is “not very” or “not at all” important to them (see p. 30).

1.6. Few Americans say they “often” or “occasionally” discuss global warming with family and friends. The number who do has declined over the years.

Most Americans (74%) say they only “rarely” or never discuss global warming with family and friends, a number that has grown substantially since 2008 (60%).

1.7. Only four in ten Americans hear about global warming in the media at least once a month; fewer hear about it from people they know.

One in five Americans (19%) says they hear about global warming in the media (TV, movies, radio, newspapers/news websites, magazines, etc.) at least once a week. Four in ten (40%) say they hear about it at least once a month. Few (6%) say they never hear about global warming in the media.

In contrast, only one in 25 Americans (4%) says they hear people they know (family, friends, co-workers, etc.) talk about global warming at least once a week, and 16% hear people they know talk about it at least once a month. One in four (25%) never hears people they know talk about global warming.

1.8. Two-thirds of Americans are at least “a little interested” in hearing about global warming.

One in three Americans are “very” (11%) or “moderately” interested (25%) in hearing about global warming, whether in the media, in conversation, or somewhere else. An additional three in ten Americans are “a little” interested (29%). One in four Americans (24%) is not interested in hearing about global warming.

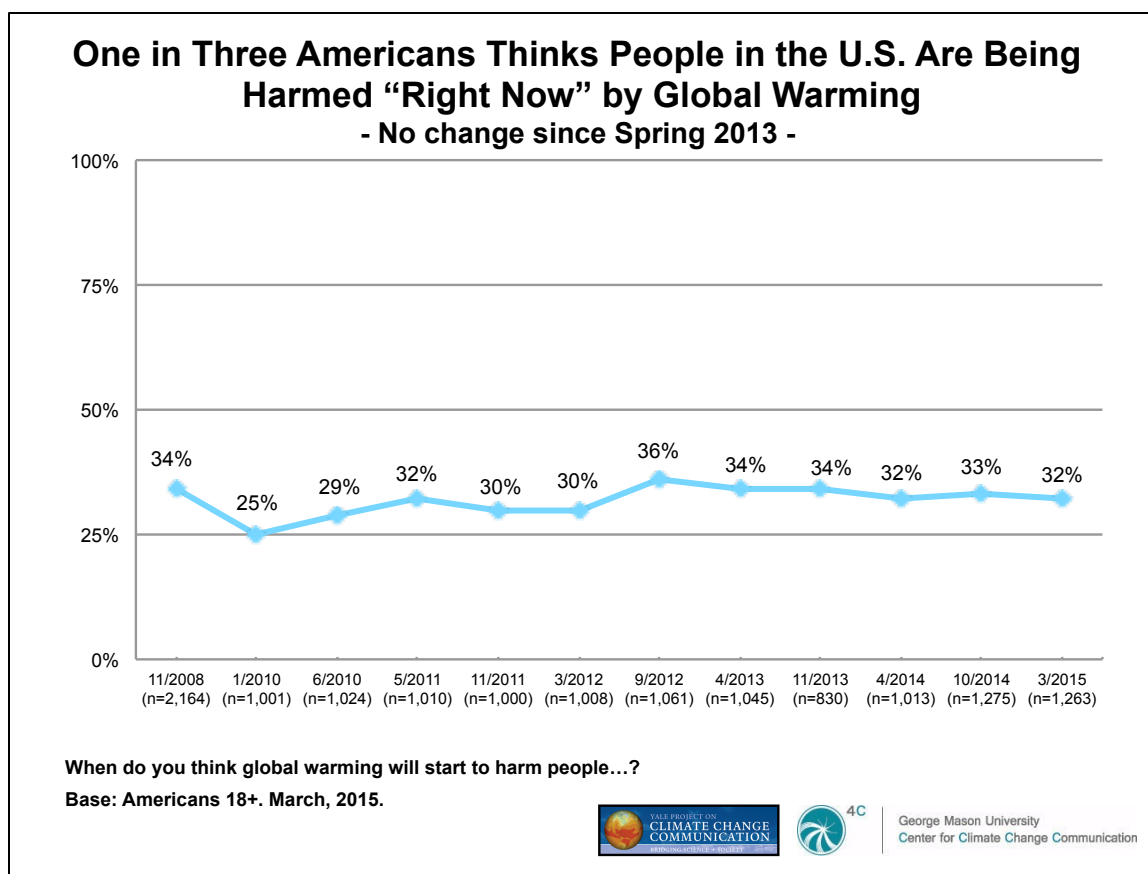

2. Perceived Risks of Global Warming

2.1. One in three Americans thinks people in the U.S. are being harmed right now by global warming.

The impacts of global warming are starting to be felt in the United States. According to the 2014 U.S. National Climate Assessment:⁴

“Residents of some coastal cities see their streets flood more regularly during storms and high tides. Inland cities near large rivers also experience more flooding, especially in the Midwest and Northeast. Insurance rates are rising in some vulnerable locations, and insurance is no longer available in others. Hotter and drier weather and earlier snow melt mean that wildfires in the West start earlier in the spring, last later into the fall, and burn more acreage. In Arctic Alaska, the summer sea ice that once protected the coasts has receded, and autumn storms now cause more erosion, threatening many communities with relocation” (p. 1).

Yet only about one in three Americans (32%) thinks people in the U.S. are being harmed “right now” by global warming, a number that has remained steady over the past several years.

⁴ <http://nca2014.globalchange.gov/downloads>

2.2. Most Americans think global warming is a relatively distant threat

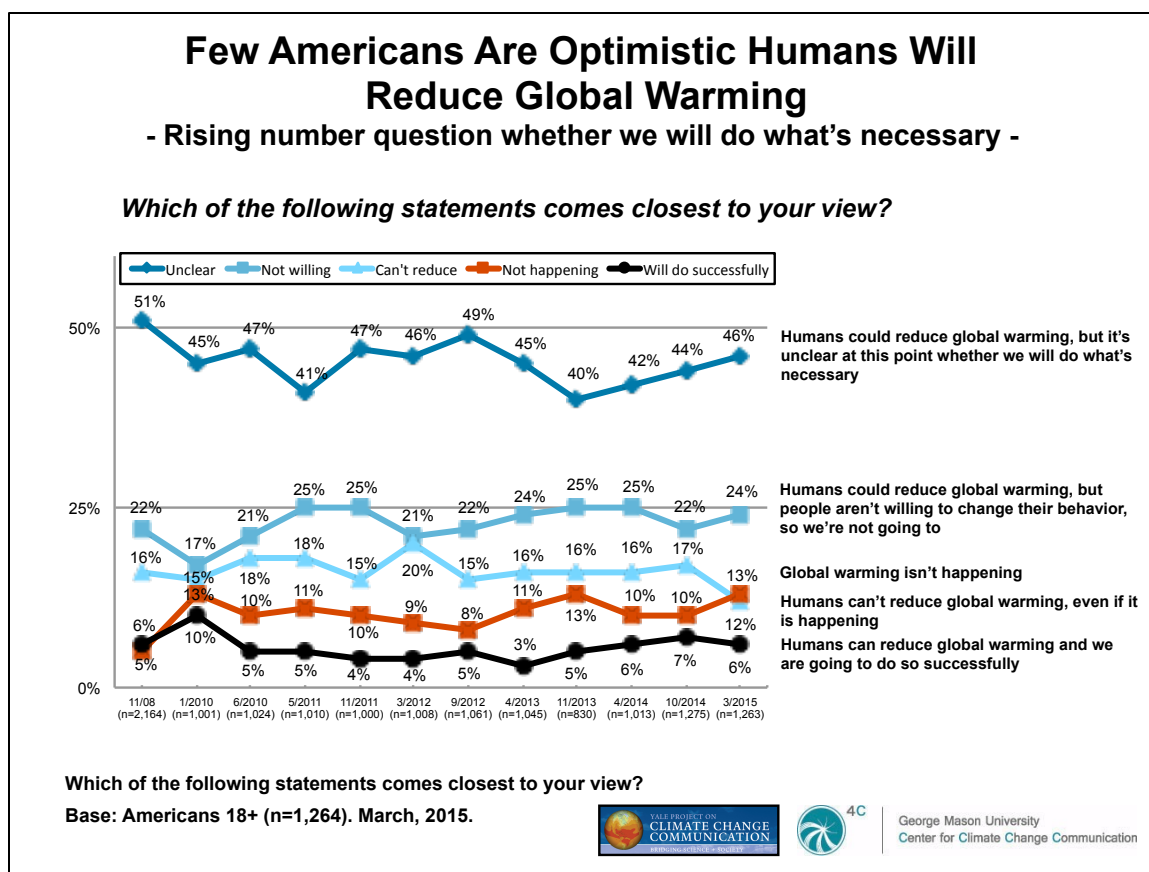

Americans are more likely to think that future generations of people (63%) will be harmed a “great deal” or a “moderate amount” than will people currently living in developing countries (52%), in industrialized countries (52%), and in the U.S. (49%). They are least likely to think people in their community (42%), their family members (41%) or they themselves (36%) will be harmed.

2.3. Few Americans are optimistic humans will reduce global warming.

Close to half of Americans (46%, up 6 points since November, 2013) say humans could reduce global warming, but it's unclear at this point whether we will do what is necessary.

Among the balance of Americans, the pessimists outnumber the optimists. Whereas only 6% say humans can and will successfully reduce global warming, about one in four (24%) says we won't because people are unwilling to change their behavior, and about one in ten (12%, down 5 points since October, 2014) says humans can't reduce global warming even if it is happening.

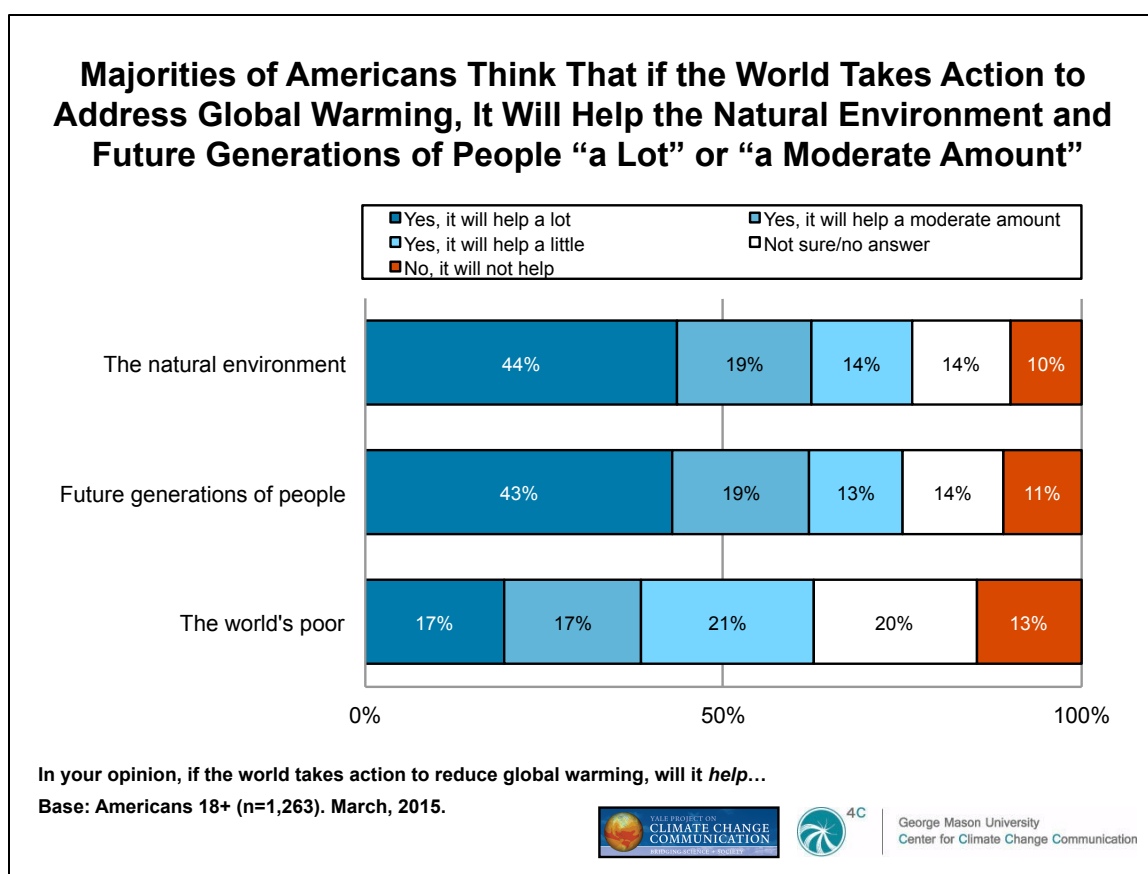

3. The Role of Government in Addressing Global Warming

3.1. Majorities of Americans think that if the world takes action to address global warming, it will help the natural environment and future generations of people “a lot” or “a moderate amount.”

Americans see benefits from world action to address global warming. Majorities think that such action will help “a lot” or “moderate” amount:

- The natural environment (63%)
- Future generations of people (62%)

One in three (34%) thinks addressing global warming will help the world’s poor at least a moderate amount, and majority think it will help the poor at least “a little” (55%).

3.2. A majority of Americans think developing clean sources of energy should be a high priority for the president and Congress. Nearly half think global warming should be a high priority.

Two in three Americans (64%) think developing clean sources of energy should be a very high or high priority for the president and Congress, a critical part of any effort to reduce global warming. Fewer (12%) say it should be a low priority.

Nearly half (45%) think global warming should be a very high or high priority for the president and Congress. About one in four (24%), however, say that global warming should be a low priority.

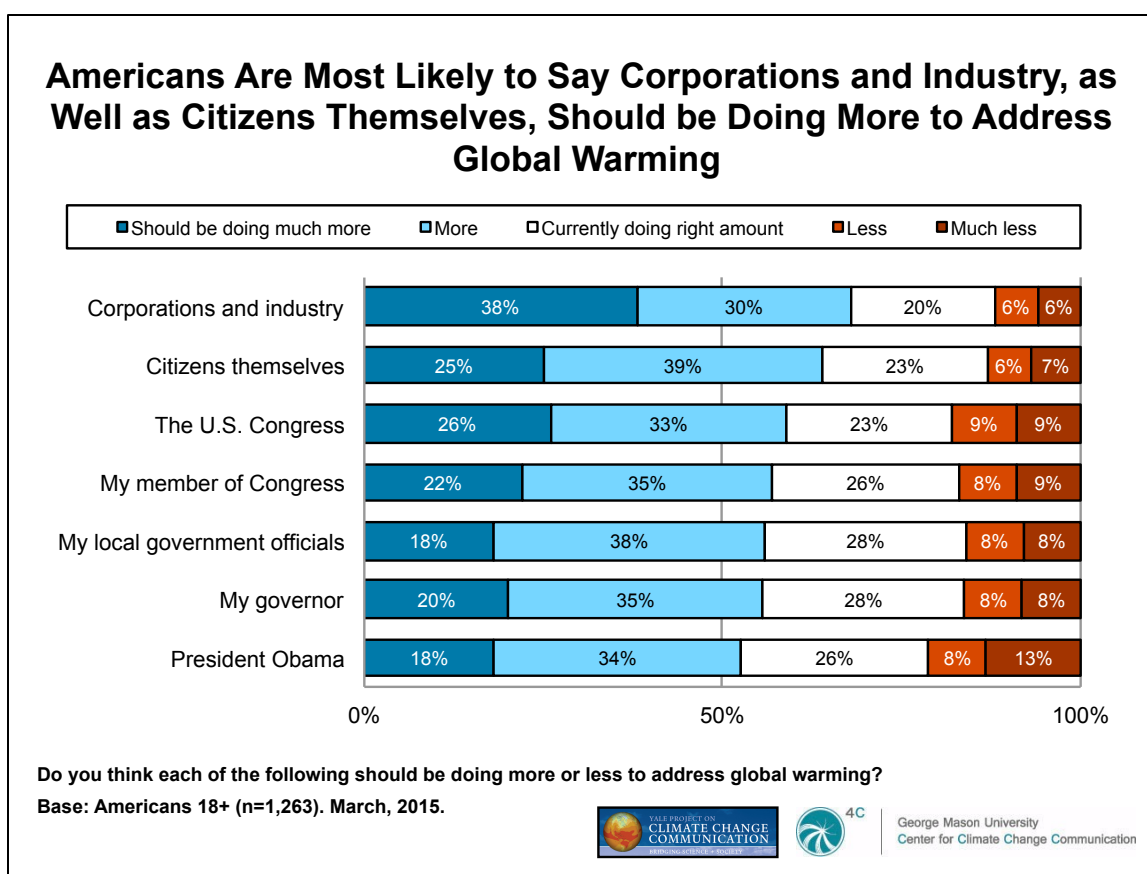

3.3. Americans are most likely to say corporations and industry, as well as citizens themselves, should be doing more to address global warming.

Americans think both the private and public sectors should be doing more to address global warming.

About two in three Americans say corporations and industry (68%) and citizens themselves (64%) should be doing “much more” or “more” to address global warming.

Half or more also believe federal, state, and local government should be doing more:

- The U.S. Congress (59%)
- My member of Congress (57%)
- My local government officials (55%)
- My governor (55%)
- President Obama (52%)

Most Americans (83%) say the U.S. should make an effort to reduce global warming, even if it has economic costs. About one in four (27%) supports a large-scale effort even if there are large economic costs. A plurality (40%) favors a medium-scale effort, even if it has moderate economic costs. And about one in six (17%) supports a small-scale effort, even if it has small economic costs. Relatively few (17%) say the United States should make no effort to reduce global warming at all (see p. 44).⁵

Nearly six in ten Americans (56%) say the U.S. should reduce its own greenhouse gas emissions, regardless of what other countries do, a number that has remained fairly stable over the past few years. Relatively few (12%) say the U.S. should reduce its emissions only if other industrialized and/or developing countries do – and only 6% of Americans say the U.S. should not reduce its greenhouse gas emissions (see p. 45).

⁵ Previous research indicates that the average U.S. citizen is willing to pay 13 percent more for their electricity in support of a national clean energy standard (see Aldy, J., Kotchen, M., & Leiserowitz, A., 2012. Willingness to pay and political support for a U.S. national clean energy standard. *Nature Climate Change*, 2, 596–599. doi:10.1038/nclimate1527).

4. Support for Policies to Reduce or Protect Against Global Warming

4.1. Americans support a broad range of policies that will help reduce or prepare for the impacts of global warming

Solid majorities of Americans “strongly” or “somewhat” support the following policies:

- Increased funding for improvements to local roads, bridges, and buildings to make them more resistant to extreme weather (81%)
- Providing tax rebates to people who purchase energy-efficient vehicles or solar panels (80%)
- Funding more research into renewable energy sources such as solar and wind power (79%)
- Regulating carbon dioxide as a pollutant (75%)
- Requiring electric utilities to produce at least 20% of their electricity from wind, solar, or other renewable energy sources, even if it costs the average household an extra \$100 a year (66%)

4.2. Seven in ten Americans support setting strict carbon dioxide emission limits on existing coal-fired plants to reduce global warming and improve public health.

Americans by greater than a two-to-one margin support (70%) rather than oppose (29%) the following policy:

“Set[ting] strict carbon dioxide emission limits on existing coal-fired power plants to reduce global warming and improve public health. Power plants would have to reduce their emissions and/or invest in renewable energy and energy efficiency. The cost of electricity to consumers and companies would likely increase.”

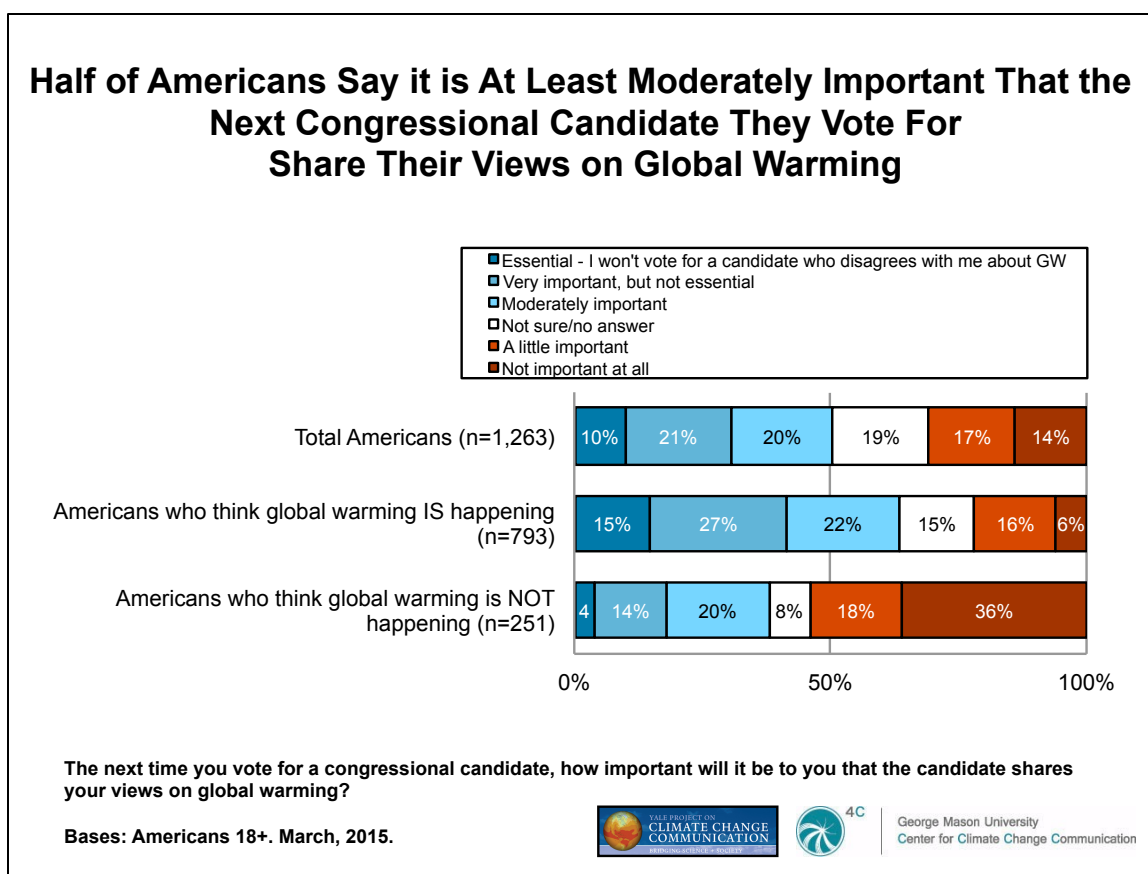

4.3. Half of Americans say it is at least moderately important that the next congressional candidate they vote for share their views on global warming

Though relatively few Americans say it is “essential” that the next congressional candidate they vote for share their views on global warming (10%), about half (51%) say it is at least moderately important. About three in ten (31%) say it is slightly or not at all important.

In contrast, among Americans who think global warming is happening, a majority (63%) say that it is at least moderately important that the next congressional candidate they vote for share their views on global warming, compared to 22% who say it is only slightly or not at all important.

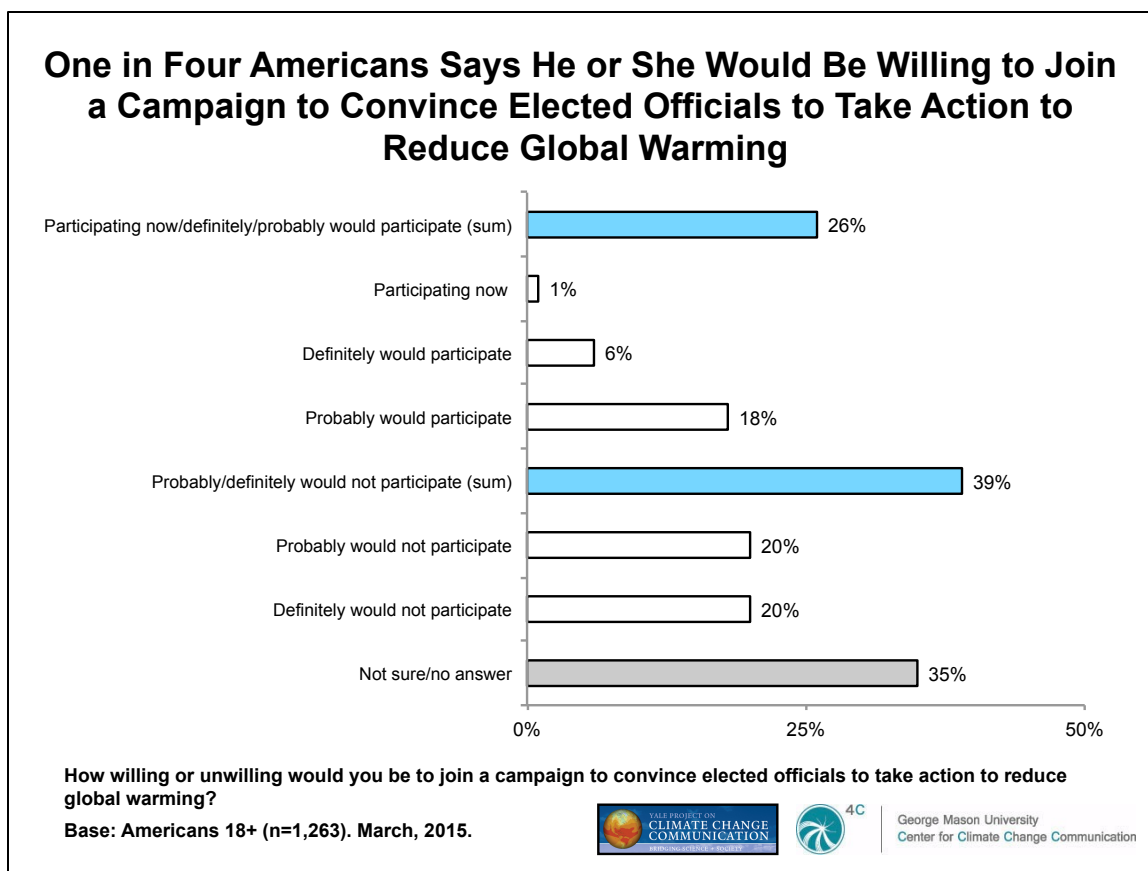

Americans who think global warming is **not** happening place less importance on the issue when it comes to their intended voting behavior: Only 4% say it is “essential” a candidate agree with their views on climate change, and fewer than half (38%) say it is at least moderately important.

4.4. One in four Americans says he or she would be willing to join a campaign to convince elected officials to take action to reduce global warming.

Americans not only support policies to reduce global warming, but about one in four (26%) are currently part of – or would “definitely” or “probably” be willing to join – a campaign to convince elected officials to take action to reduce global warming.

About four in ten (39%) probably or definitely would *not* be willing to join such a campaign.

5. The Moral Dimensions of Global Warming

5.1. Majorities of Americans think global warming is a major environmental, scientific and/or agricultural issue.

Global warming represents a fundamental challenge to humanity on many dimensions, and understanding how people perceive the challenge is critical to formulating effective communication strategies around the issue.

To better understand how Americans think about global warming, we asked respondents to indicate what kind of issue, if any, they consider it to be: environmental, scientific, economic, health, moral, religious, etc. For each category of the issue they selected, we then asked if they consider it to be a major or minor issue.

Majorities of Americans say global warming is a major environmental (68%), scientific (60%), or agricultural issue (55%). Nearly half consider it a major economic (46%) or health issue (44%).

Few consider global warming to be a major national security (16%), poverty (16%), social justice (15%), spiritual (7%), or religious issue (6%).

5.2. A majority of Americans think it is humankind's responsibility to protect and care for Earth and its natural resources – not only use it for our benefit.

Survey respondents were asked to indicate their level of agreement with two opposing perspectives...

1. "It is humankind's responsibility to protect and care for the Earth and its natural resources"
2. "It is humankind's right to use the Earth and its natural resources for our own benefit"

...where the statements were placed on the opposite ends of a 7-point scale as seen in the chart below. Respondents indicated their relative agreement with the two statements by picking one of the numbers on the scale, where a "1," "2," or "3" indicates stronger agreement with statement one, a "5," "6," or "7" indicates stronger agreement with statement two, and a "4" means the respondent agrees with both statements equally.

Americans are nine times more likely to lean toward the view that it is people's responsibility to care for the Earth and its resources (62%) than toward the belief that it is our right to use the Earth and its resources for our own benefit (7%). Three in ten (30%) put themselves equally between the two positions.

6. Trusted Sources of Global Warming Information

Majorities of Americans trust climate scientists, family and friends, non-climate scientists, TV weather reporters, and their primary care doctor as sources of global warming information.

Over half of Americans “strongly” or “somewhat” trust the following for global warming information:

- Climate scientists (70%)
- Family and friends (67%)
- Other kinds of scientists (64%)
- Television weather reporters (60%)
- Their primary care doctor (57%)

Half (50%) trust Pope Francis on the topic, more than who trust any other religious figure asked about, including the Dalai Lama (41%), Billy Graham (34%), Desmond Tutu (26%), T.D. Jakes (15%), and Rick Warren (15%).

Among political leaders asked about, President Obama is the most trusted, though by fewer than half of Americans (42%), followed by Hillary Clinton (39%), Jeb Bush (24%), and John Boehner (16%).

A number of sources are distrusted by majorities of Americans, including Jeb Bush (61%), U.S. military leaders (56%), the mainstream news media (56%), John Boehner (56%), Hillary Clinton (55%), and President Obama (53%).

Appendix I: Data Tables

(Base: Americans 18+)

Recently, you may have noticed that *global warming* has been getting some attention in the news. Global warming refers to the idea that the world's average temperature has been increasing over the past 150 years, may be increasing more in the future, and that the world's climate may change as a result.

What do you think: Do you think that global warming is happening?

	March 2015	Oct 2014	April 2014	Nov 2013	Sept 2012	Sept 2012	March 2012	Nov 2011	May 2011	June 2010	Jan 2010	Nov 2008
(Unweighted base)	(1,263)	(1,275)	(1,013)	(830)	(1,045)	(1,061)	(1,008)	(1,000)	(1,010)	(1,024)	(1,001)	(2,164)
	%	%	%	%	%	%	%	%	%	%	%	%

(Base: Americans 18+)

To the best of your knowledge, what percentage of climate scientists think that human-caused global warming is happening? Please click on the slider bar below to indicate your answer. You can slide the indicator to the position that best describes your opinion. If the indicator does not work, you can enter a number in the number box.

	March 2015	Oct 2014
	(1,263)	(1,275)
	%	%
Of those who provided a rating:		
Mean	64	65
Median	68	67
Percent who did not provide a rating (Don't know/Refused)	32	30

(Base: Americans 18+)**How worried are you about global warming?**

Appendix II: Survey Method

The data in this report are based on a nationally representative survey of 1,263 American adults, aged 18 and older, conducted from February 27 – March 10, 2015. All questionnaires were self-administered by respondents in a web-based environment. The survey took, on average, about 26 minutes to complete.

The sample was drawn from GfK's KnowledgePanel®, an online panel of members drawn using probability sampling methods. Prospective members are recruited using a combination of random digit dial and address-based sampling techniques that cover virtually all (non-institutional) resident phone numbers and addresses in the United States. Those contacted who would choose to join the panel but do not have access to the Internet are loaned computers and given Internet access so they may participate.

The sample therefore includes a representative cross-section of American adults – irrespective of whether they have Internet access, use only a cell phone, etc. Key demographic variables were weighted, post survey, to match US Census Bureau norms.

The survey instrument was designed by Anthony Leiserowitz, Geoff Feinberg, Seth Rosenthal, and Jennifer Marlon of Yale University, and Edward Maibach and Connie Roser-Renouf of George Mason University.

Margins of error

All samples are subject to some degree of sampling error – that is, statistical results obtained from a sample can be expected to differ somewhat from results that would be obtained if every member of the target population was interviewed. Average margins of error, at the 95% confidence level, are as follows:

- March 2015: Fielded February 27 – March 10 with 1,263 American adults. The margin of sampling error is plus or minus 3 percentage points.
- October 2014: Fielded October 17 – 28 with 1,275 American adults. The margin of sampling error is plus or minus 3 percentage points.
- April 2014: Fielded April 21 – 24 with 1,013 American adults. The margin of sampling error is plus or minus 3 percentage points.
- November 2013: Fielded November 23 – December 9 with 830 American adults. The margin of sampling error is plus or minus 3 percentage points.
- April 2013: Fielded April 8 – 15 with 1,045 American adults. The margin of sampling error is plus or minus 3 percentage points.
- September 2012: Fielded August 31 – September 12 with 1,061 American adults. The margin of sampling error is plus or minus 3 percentage points.
- March 2012: Fielded March 12 – March 30 with 1,008 American adults. The margin of sampling error is plus or minus 3 points.
- November 2011: Fielded October 20 – November 16 with 1,000 American adults. The margin of sampling error is plus or minus 3 points.

- May 2011: Fielded April 23 – May 12 with 1,010 American adults. The margin of sampling error is plus or minus 3 points.
- June 2010: Fielded May 14 – June 1 with 1,024 American adults. The margin of sampling error is plus or minus 3 points.
- January 2010: Fielded December 24, 2009 – January 3, 2010 with 1,001 American adults. The margin of sampling error is plus or minus 3 points.
- November 2008: Fielded October 7 – November 12 with 2,164 American adults. Data were collected in two waves: wave 1 from October 7 – October 20 and wave 2 from October 24 – November 12. The margin of sampling error is plus or minus 2 points.

Rounding error

For tabulation purposes, percentage points are rounded off to the nearest whole number. As a result, percentages in a given chart may total slightly higher or lower than 100%. Summed response categories (e.g., “strongly trust” + “somewhat trust”) are also rounded.
